

China's Ministry of Environmental Protection requires coal gas to be used in are

China's Finance Ministry quoted the Ministry of Environmental Protection on Thursday as notifying the Ministry of Environmental Protection that it is the first principle to ensure that the masses are warm and wintering in the areas where coal-to-gas (electricity) is not yet completed and the traditional coal-heating or other alternative methods continue to be used.

Choi said the Ministry of Environmental Protection has issued a letter of urgency to the "2 + 26" cities in Beijing, Tianjin and Hebei Province and the surrounding areas, including a letter on "Doing a good job of comprehensive management of scattered coal to ensure the masses warm their winter work", requiring completed projects Place, we must ensure that air supply, power supply and stable prices stable. In the presence of problems and contradictions, the use of electricity and gas in fields such as industry must make way for the people.

According to the Ministry of Environmental Protection, the Ministry of Environmental Protection recently verified the implementation of the work (coal to gas, coal to electricity) and found that there were areas where substituting electricity with coal and substituting gas with coal for gas were not yet completed as planned, and heating in some areas Quarter of gas tension and other issues. In promoting the management of bulk coal in various places, it is necessary to further strengthen the comprehensive coordination of coal-to-gas conversion, coal-to-electricity conversion and gas source and power source security, and adhere to the principle of ensuring the masses warm the winter.
